

What a project... This was a serious undertaking that I am proud to have accomplished. The coding and outcome of this project was supposed to be a restaurant website that allowed people to make reservations and get real-time feedback if their reservation was made or if it couldn't be made. The examples I used helped make sure the coding would work along with allowing viewers to see how practical and efficient the process was. Creating the tables was easy as I had a template to help with organizing the columns, however making sure things worked was like trying to solve a rubix cube blind. If even the slightest mistake was made, then the whole project wouldn't work, and I'd have to search for every nook and cranny to find/fix the error. However, I am satisfied with the result, and I am glad I did what I did. It was a lot of tedious work but in the end, I think it all came together rather nicely.
